

CUSTOM INSTALLATION SPEAKERS

FROM LYNGDORF AUDIO

Custom installations with Lyngdorf Audio

Steinway Lyngdorf has a vast experience in designing home cinemas with the outstanding Steinway & Sons loudspeakers and sound processors, while the Lyngdorf MP-40 and MP-60 2.1 multichannel processors set new benchmarks for surround sound and immersive audio. The unique RoomPerfect™ room calibration aligns all speakers and woofers perfectly with each other and adapts the sound to any room.

With the LS-1000, D-500, D-60, D-5 and BW-20 models, Lyngdorf Audio brings its expertise in home cinema and loudspeakers to custom installation speakers. Eight models to suit different installations, from a modern living room with in-wall speakers next to the TV up to the largest home theater with a big screen and immersive audio.

With Lyngdorf Audio you'll experience your favourite movies, games, and music on a new level of sound quality.

D stands for discreet

The D speakers bring Lyngdorf Audio sound quality to the custom installation speaker market. After the successful introduction of Lyngdorf loudspeakers for modern living rooms, ranging from the MH and FR on-wall speakers and BW boundary woofers to the CS-1 cabinet speaker, the Lyngdorf D series expands the company's range with in-wall and in-ceiling speakers for stereo and multichannel installations.

D stands for discreet – all models are designed as installation speakers for discreet in-wall or in-ceiling integration, featuring a wall-fixing mechanism with mounting legs. All models also come with their own loudspeaker enclosure, making system planning and the actual installation as easy as possible, with no after-market backbox or closed wall cavity required. This also ensures that the sound performance is always defined and consistent, depending less on the wall construction and the available space behind the wall.

LS-1000 for large home cinemas

With our experience in creating speakers for Steinway Lyngdorf reference home theaters, especially the outstanding Steinway & Sons LS models, combined with our experience from the Lyngdorf MH and FR speakers, our engineers have developed the LS-1000 for Lyngdorf Audio systems. Four LS-1000 modules combined create a line source speaker, with each module consisting of four 115mm midrange drivers with light aluminum cones, 25mm voice coils and powerful vented magnets, complemented by eight 1" soft dome tweeters. Four LS-1000 modules combined result in a line array with 16 midrange drivers and 32 tweeters. Depending on the room width, seat layout, speaker position and screen size, three different LS-1000 models have been designed for the best sound dispersion into the room:

Lyngdorf LS-1000 Center

has the tweeters mounted centered, leading to a wider sound dispersion equal to the left and right. This makes it an ideal choice as Center speaker behind an acoustically transparent screen, or even as left and right speakers to achieve the widest possible listening area in a wide room.

Lyngdorf LS-1000 Left

has a sound dispersion slightly beaming inwards when placed on the left side, away from the sidewall and towards the listening area.

Lyngdorf LS-1000 Right

has a sound dispersion slightly beaming inwards when placed on the right side, away from the sidewall and towards the listening area.

The largest Lyngdorf boundary woofer

The BW-20 complements the Lyngdorf LS and Discreet custom installation speakers, designed for both stereo and multichannel systems. BW stands for Boundary Woofer – a Lyngdorf approach where a sub-woofer is designed to be placed near the wall boundaries, for example right in the corner, achieving the best bass impulse response by avoiding delayed bass bouncing back off the walls, instead taking advantage of room acoustics. The BW-20 is the company's largest BW model, extending the line-up of the compact in-room woofers BW-2 and BW-3.

Two 12" woofers are equipped with vented magnets, double spiders, and aluminum cones, built into a large cabinet volume and a rigid construction. This makes the BW-20 a very capable woofer in any room and system. The woofers are high-excursion designs, reaching an excursion of +/- 20mm and enabling the BW-20 to play the lowest frequencies on a very high volume level, with a max. SPL of 118dB. The BW-20 is a passive design with an IEC power handling of 700W, allowing users to choose an individual power amplifier for the best system match.
